

After you are done downloading MySQL workbench, you follow the instructions from the executed file. It is straight forward by picking recommend.

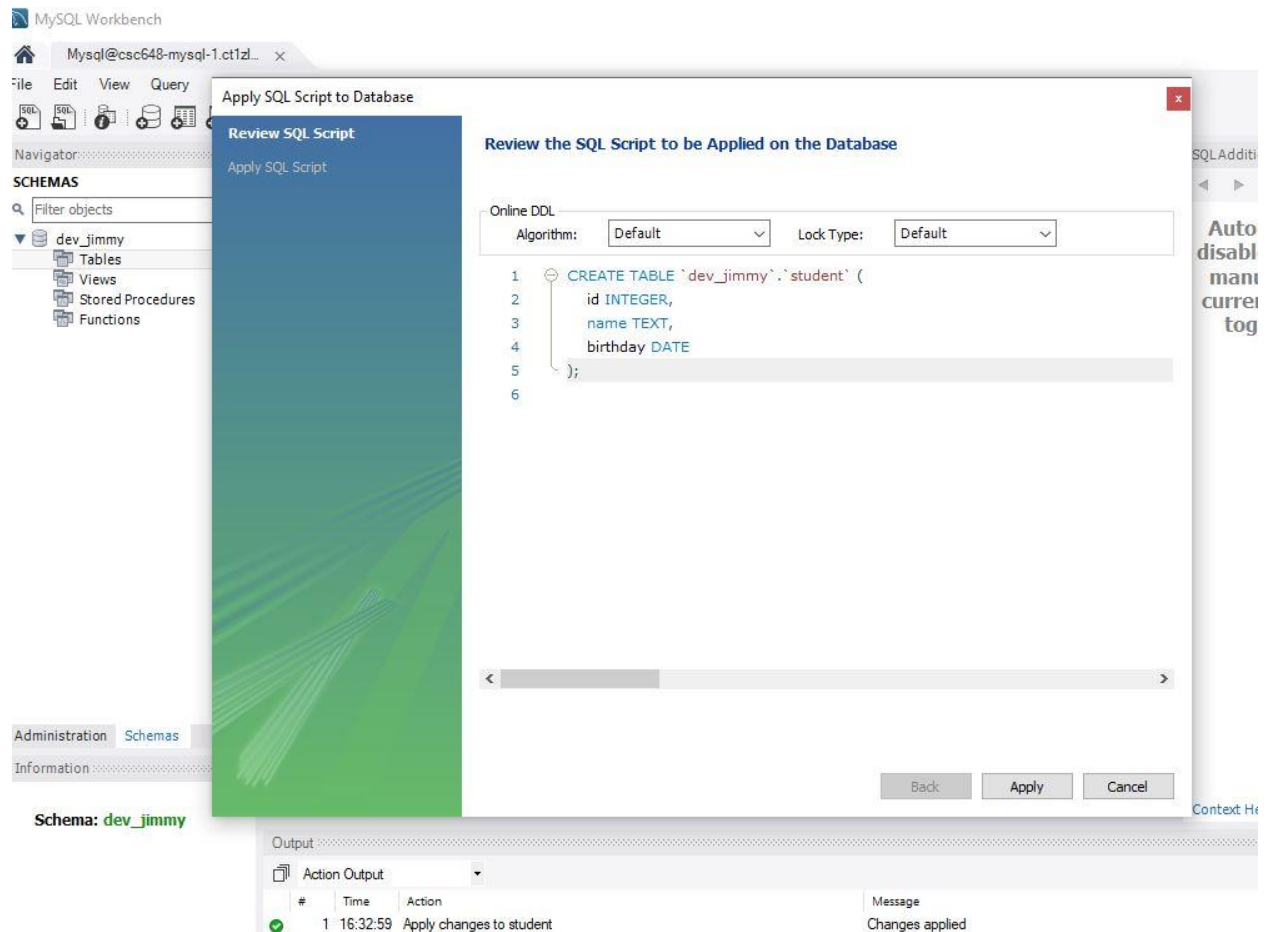

Here is how I connect to database. To open “Connect to Database”, I went to click word “Database” or ctrl + U. I copied pasted the information from bot to connect to database setting.

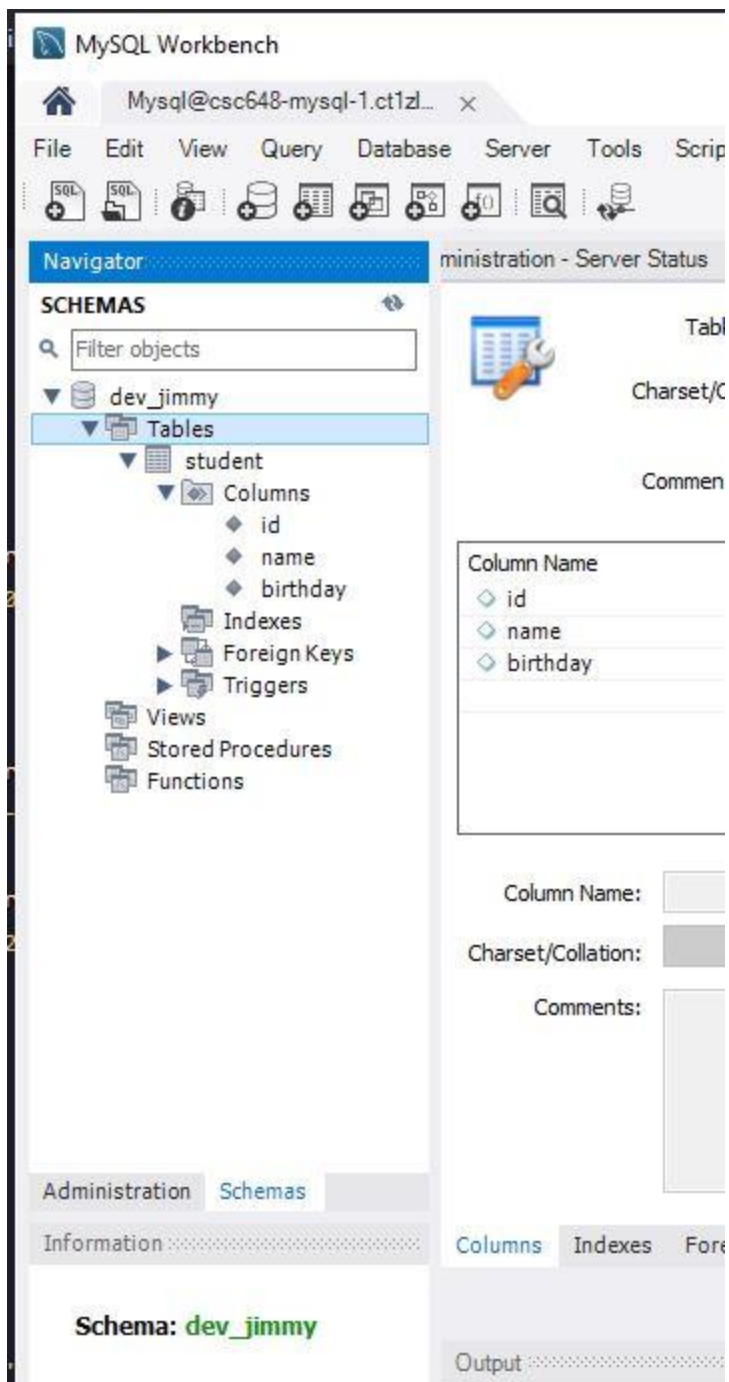

Click Schemas to view the database.

Here is how I created the table.

Here is where I typed my sql code.

Here I am finished with the database creation.
